# verdio Press Release

## City of Danville saves money, time, and space with the Verdio Green Computer.

### Southern Virginia is going Green with the purchase of green computers from EcomNets, the creator of the Verdio Green PC.

Herndon, VA, May 4, 2010. In southern Virginia, along the North Carolina border, 60 miles north of Research Triangle Park, you will find one of the finest places to do business with. The City of Danville in Virginia is a small emerging market for economic development. Three weeks after the official announcement of the opening of the new Green Technology Center, where Verdio will be manufactured, the City of Danville decided to make a purchase.

The City of Danville under the supervision of the Deputy City Manager, Joe King, made a purchase of Verdio Green PC's for their IT Department. "The City of Danville is very excited to partner with EcomNets in creating a Green IT Infrastructure. By decreasing our carbon emissions by 70% and reducing our power consumption, the City sees the Verdio PC as a means to increase our operational efficiency", said Inez Harville, the IT Director for the City of Danville. Mrs. Harville was instrumental in making the deal happen.

EcomNets Green IT Solutions are comprised of server virtualization, desktop virtualization, PC power management, and data de-duplication. The Verdio desktop device is a hardware addition to professional services. For customers new to virtualization or looking for an entry-level solution, Verdio allows companies three flavors of virtualization: VMware, Microsoft, and Citrix, or any combination of the three.

"We have provided managed services around traditional desktops for 10 years, and see desktop virtualization as a new, high-value service we can offer customers," said Jithin Anchan, Sr. Project Manager of EcomNets, "With Verdio, we can deliver a valuable new service that is quick and easy to deploy. The Verdio Green PC will enable EcomNets to be much more profitable at desktop management, and the virtualized Verdio will allow us to offer additional services around virtualization such as Cloud Computing."
